# What's Included

## ? Download folder

The download folder includes the development tools and the minimal versions of those tools that are compatible with the class. If you have already installed a newer version of the tool, you may use that.

Start by downloading all the files, then read the 'READ ME FIRST.PDF' instructions

## Step by Step Checklist

### ? Checklist

- ☐ Download the files in the download folder
- ☐ Read the flyer '*READ ME FIRST.PDF*'
- ☐ Install MPLAB X
- ☐ Install the XC Compiler for your class
- ☐ Install Proteus VSM simulator
- ☐ Install the Proteus Plug into MPLAB X
- ☐ Run '*<classname> Student Install.exe*'
- ☐ Run and Debug the project Getting Started to get the password

# Install

## MPLAB X

### Requirements

**Development Environment:** MPLAB® IDE X  
**Operating System:** PC Windows XP or Vista or Windows 7

### Installing

Once you have downloaded the MPLAB X installer, installation is easy.

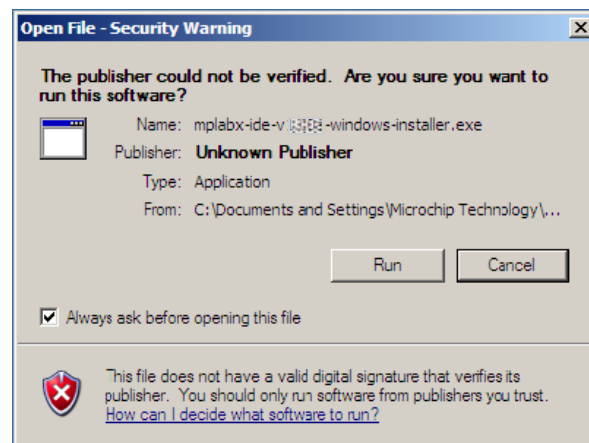

- 1 Browse to where the installer was downloaded. You are looking for the file called:

**mplabx-ide-vX.XX-windows-installer.exe**

- 2 Double click the installer

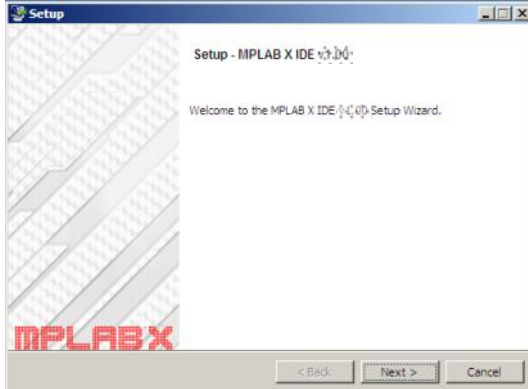

You may be asked to verify that you want to run this program. If so, click yes.

## GETTING STARTED GUIDE

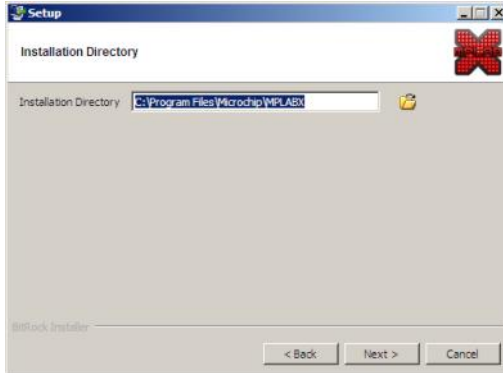

**3** Click **Next**

**4** You will need to agree to the License and  
Click **Next**

**5** Click **Next**

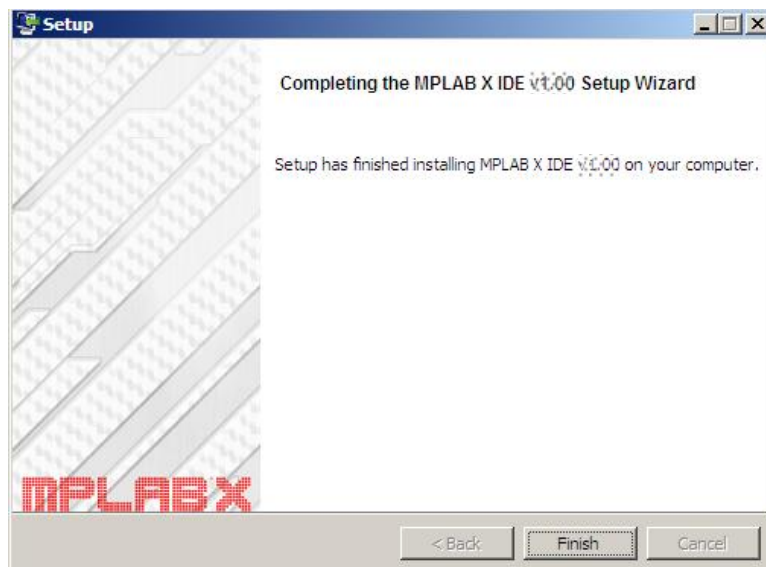

**6** Click **Next**

**7** **Done !**

Just click **Finish**

# Install XC Compiler

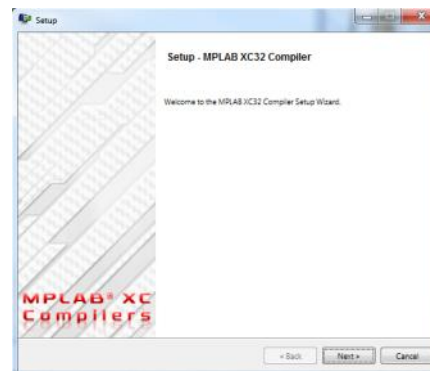

## Procedure

- 1 Double-click the installer provided in the download folder for your class. Depending upon which class you are taking, it will be named:

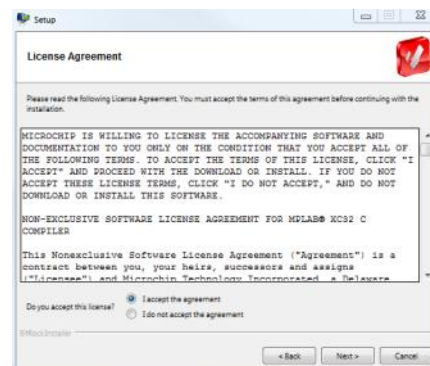

**XC8-vX.XX-windows.exe**  
**XC16-vX.XX-windows.exe**  
**XC32-vX.XX-windows.exe**

Then click **Next**

- 2 You will need to agree to the License Agreement

Click **Next**

- 3 Choose the type of license. We recommend you use the '**Install Compiler**' option.

Then click **Next**

## GETTING STARTED GUIDE

4

Accept default selection to install C compiler directly onto this computer.

Click **Next**

5

Leave activation key field empty.

Click **Next**

6

Click **Yes**

7

Accept default selection to run compiler in free mode

Click **Next**

8

Accept default compiler path

Click **Next**

9

Accept default selection to modify PATH variable

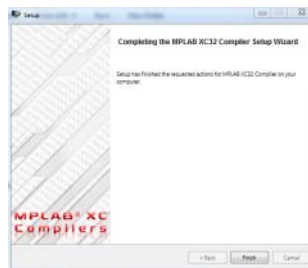

Click **Next**

10

Click **Finish**

**And you're done!**

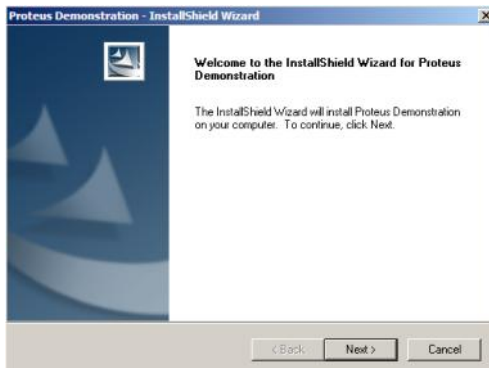

# Install Proteus VSM

## Procedure

- 1 Double click on the installer you downloaded named:

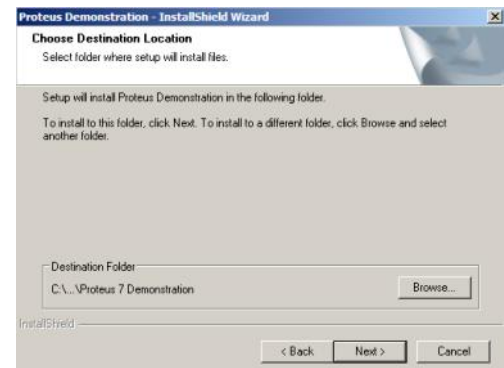

**Proteus VSM vX.XX.XXexe**

- 2 Click **Next**

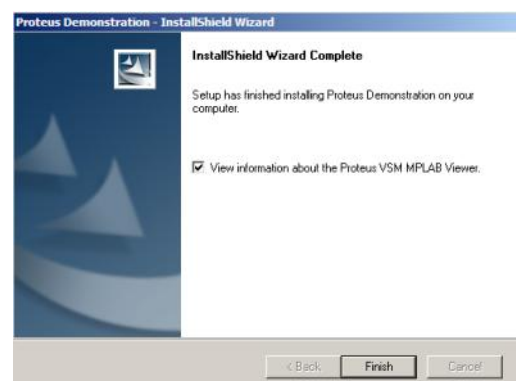

- 3 Click **Next**

- 4 Click **Next**

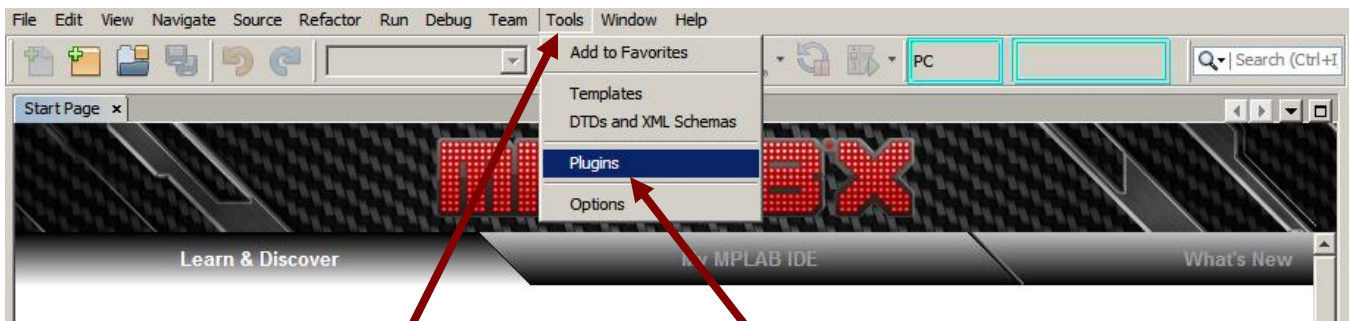

- 5 Click **Finish**

## Install the MPLAB X Proteus Plug In

### Procedure

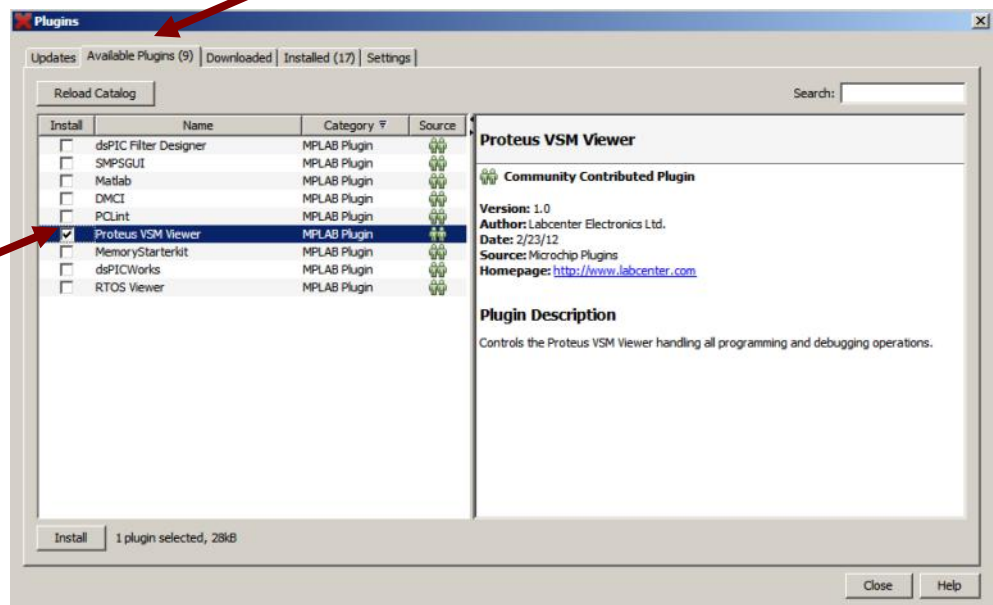

1 Open MPLAB X

2 Go to the **Tools** menu

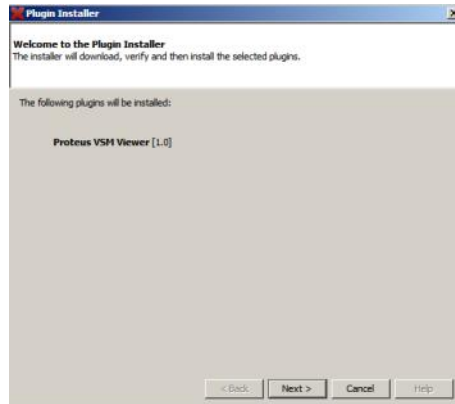

3 Then **Plug ins**

4 Click on the **Available Plugins** tab

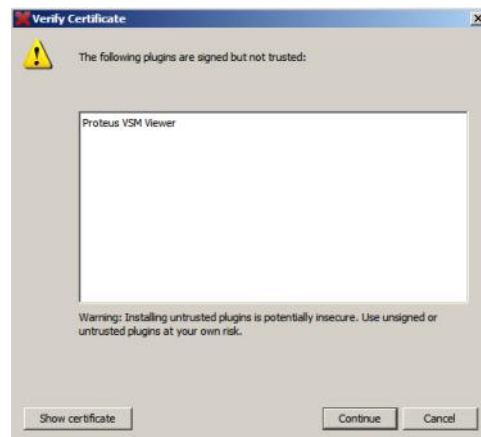

5 Click the radio button to select Proteus VSM Viewer

6

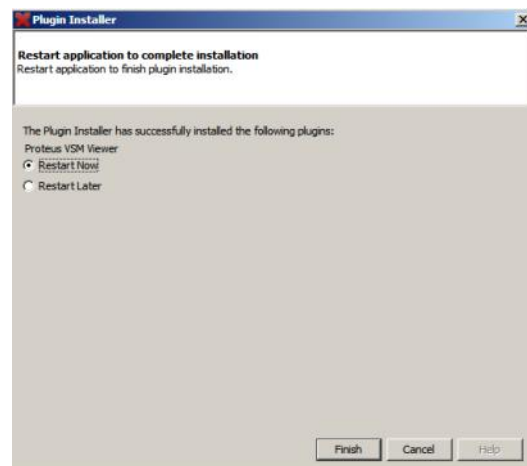

Click **Next**

7

Click **Next**

8

The installer will now ask you to let it restart MPLAB X.  
Once MPLAB X restarted the plug in is ready for use.

Click **Finish**

# Install Student Files

## Procedure

The '<classname> Student Install.exe' file is a Winzip self extractor file that sets up all the training material for a class. Once you have registered you will have received the link to the tools and class materials. This file will be named in the format of:

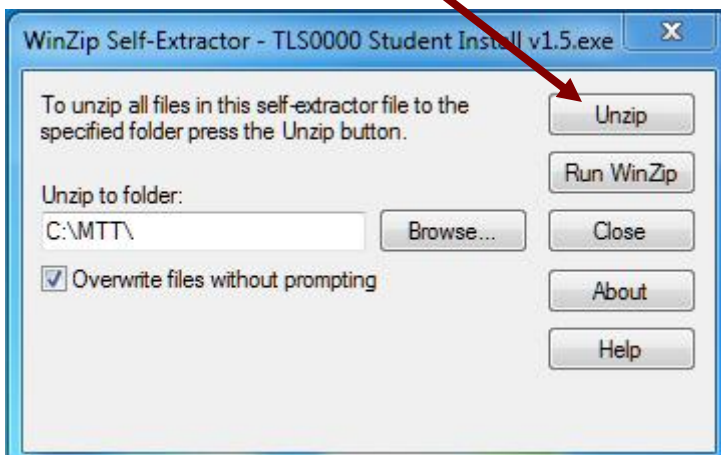

Double click the Student Install.exe file and it will unpack all the files to the folder:

**1** **C:\MTT\PRExxxx**

Then click **Unzip**

If you change the default path during the unzip the lab manuals used in class will have the wrong path names.

**2** Click **OK** when complete

## GETTING STARTED GUIDE

Here is an example of a typical unzipped Student Install

# Run the Getting Started Lab

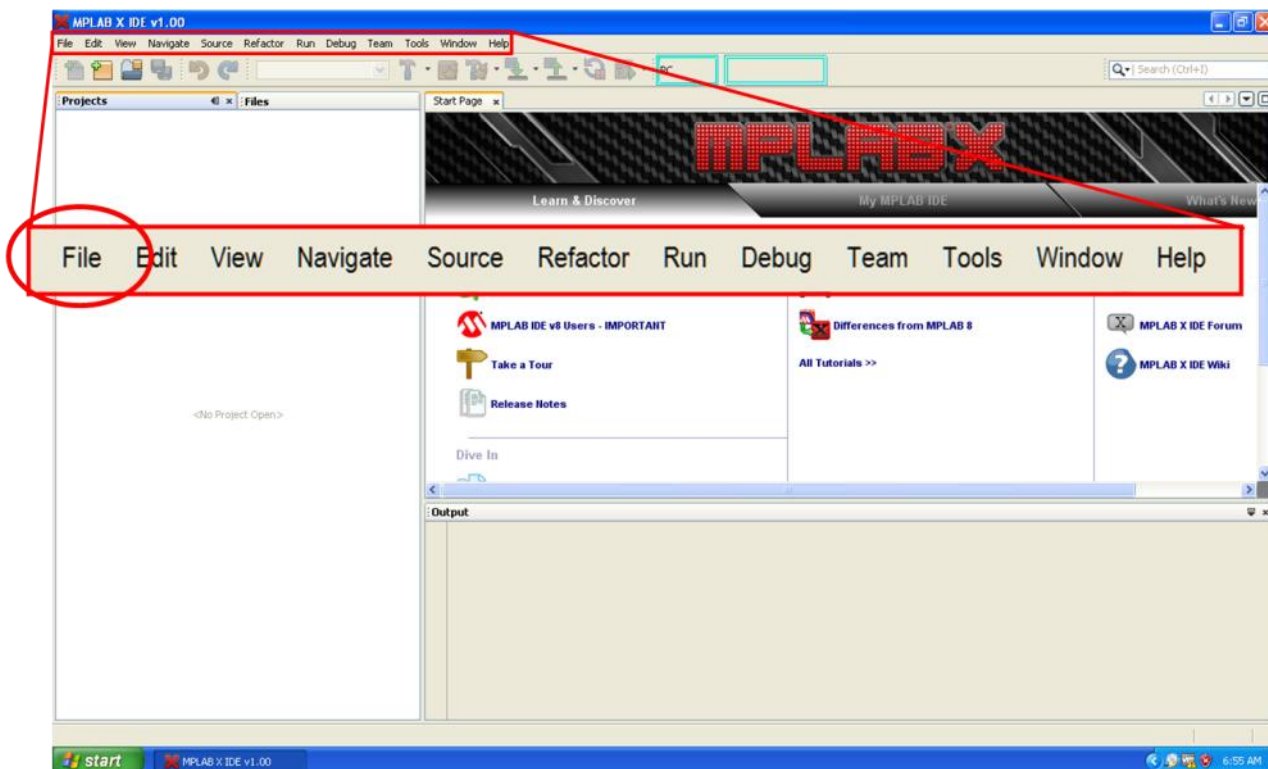

## ? Getting the password

- 1 Open MPLAB X by double clicking the icon on your desktop.

- 2 When the desktop opens, go to the File menu in the upper left corner.

## GETTING STARTED GUIDE

3

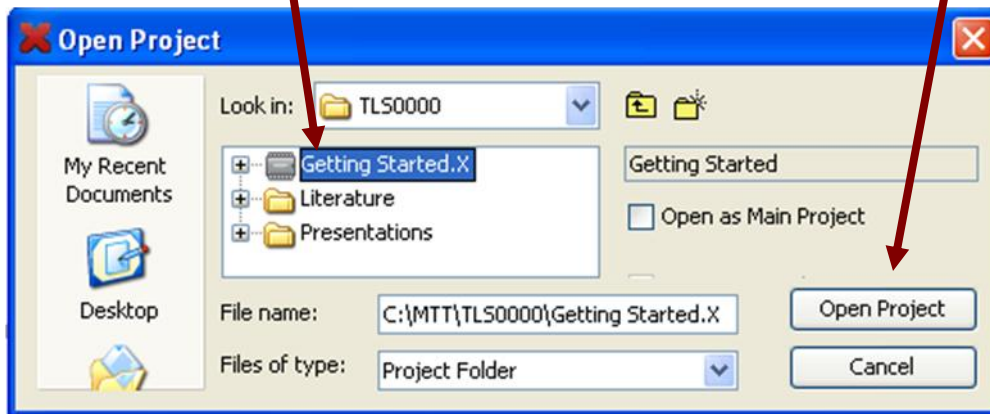

Now click  
*Open Project*

4

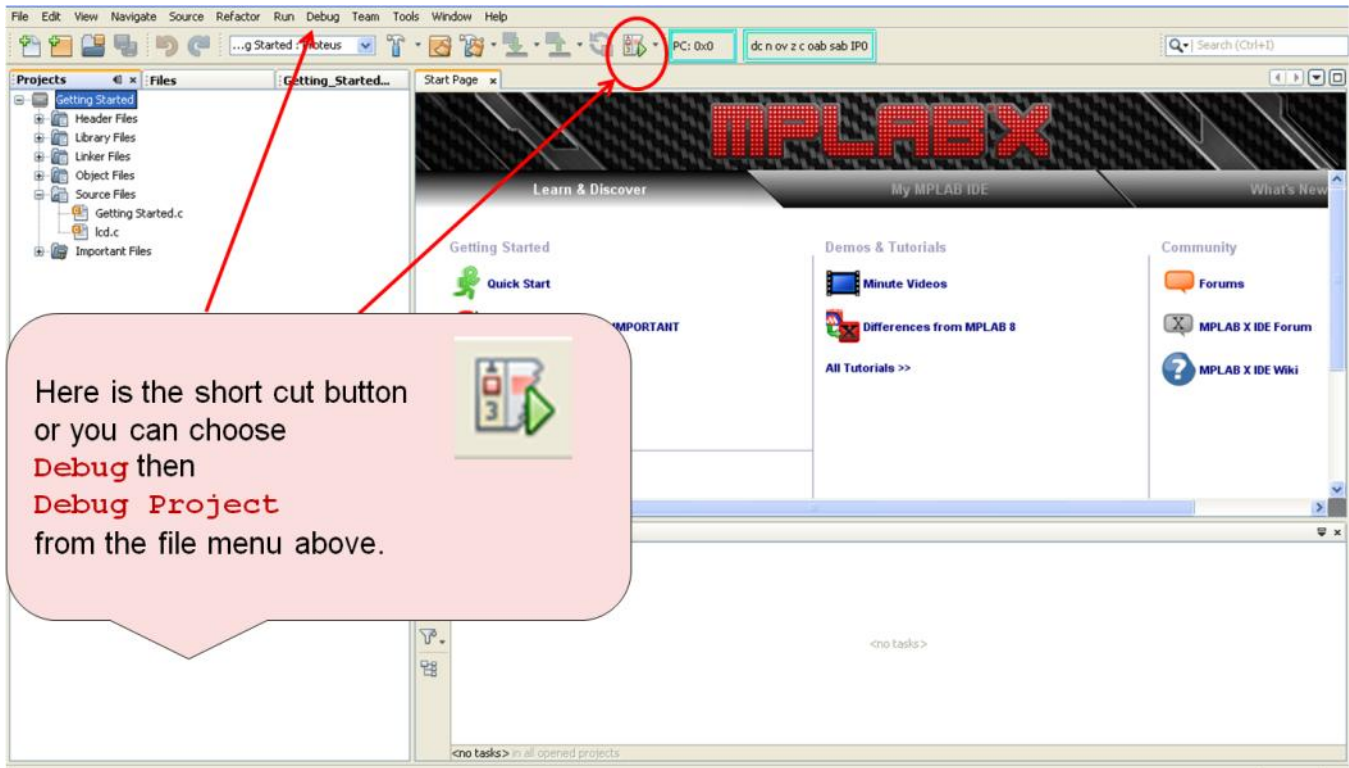

Browse to the folder: C:\MTT\<classname>\Getting Started.X

Once you have selected the folder, click '*Open Project*'

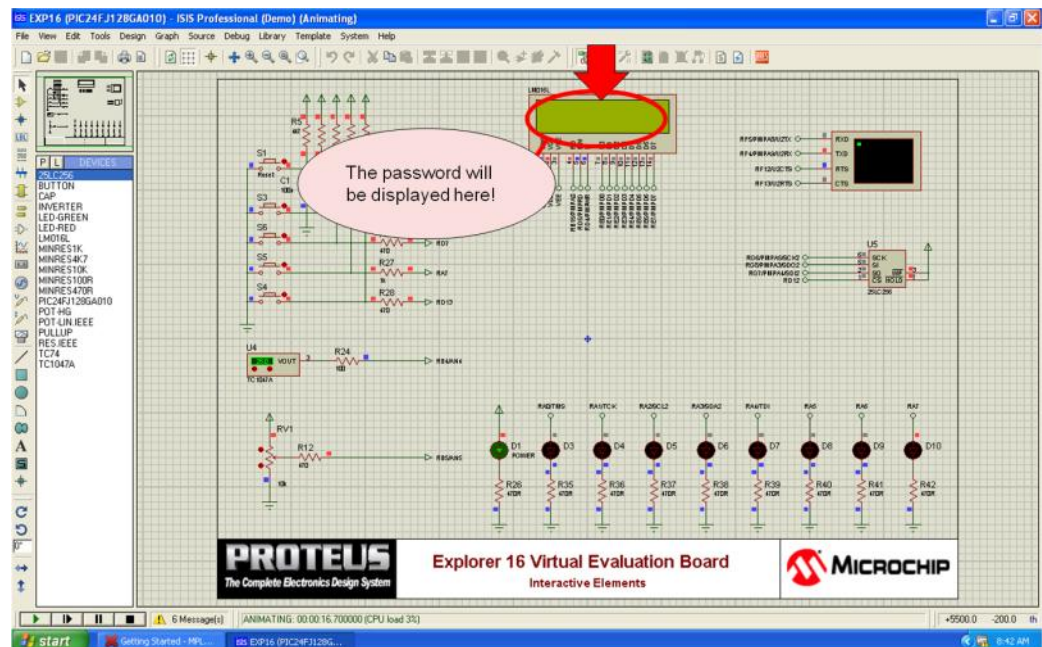

- 5** Everything will load for you. All you need to do is click on **Debug -> Debug Project** or click on the shortcut icon shown below.

- 6** This project is designed to verify that all the tools you installed are working properly. If so, the class password will be displayed on the LCD.

**Congratulations! You are ready for class.**

# Get Help

If you have tried everything and the Getting Started Lab still will not run, we have several options to get help.

1

Join us for a free class titled **TLS0000**.

This class, "Getting Started with Microchip Live Online" was created to help get you unstuck. A live instructor will guide you through the entire process of getting ready for your class.

2

Contact us through :

[www.microchip.com/support](http://www.microchip.com/support)

Here you can ask specific questions if you are stuck on a single topic.

When you are finished, select Log Out and close your browser to ensure the confidentiality of your information.

# Get Help
